

Hello

I am a refugee from Ukraine, today I have been living in Denmark for three weeks. I am a second-year student of the Kharkiv National University of Radio Electronics with a degree in Computer Science/Artificial Intelligence. Looking for an internship or part-time job in an IT company. I have my own computer and stable internet, good knowledge of English and German, as well as Russian and Ukrainian. I did an internship at an IT company in Ukraine in the field of databases, but I didn't have time to go to work - the war began. Unfortunately, I have no work experience, but I have a desire and a vital need to start working and help my family. I would be grateful for your consideration of my resume. Thank you in advance. Looking forward to getting an internship or a job in your company.

Sincerely,

Anna Ostron.
